SUBJECT: Filter for Smoking Article
Helferich File 582-358, PM 351

Dear Mr. Helferich:

I have discussed the wording in the enclosed application with Dr. Shaffer and Dr. Seligman, and I have penciled in on the original copy their suggested phraseology. We believe that this wording will distinguish the gas phase of the smoke and the total particulate matter. The two, then, make up the term "smoke", as we have used the word. I don't believe that any further changes will be needed but I shall leave that to your judgment.

In the sentence which you expect to add, "It is noted that the gas stream passes first through the wall 13 for removing the particulate phase before it reaches the chemical material.....", it would be in keeping with our revision to use the words "smoke stream" instead of "gas stream".

If these suggested revisions meet with your approval, I am sure that we can execute the oath as soon as we have received the newly typed copy.

Sincerely yours,

TCH

(Mrs.) Thelma C. Hestwole
